

ABSTRACT OF THE DISCLOSURE

Methods for producing granular compositions comprise the steps of preparing a viscous liquid mixture, forming a plurality of ligaments from the viscous liquid mixture, cutting the ligaments with one or more liquid jet streams to form pieces, and drying the pieces to form the granular compositions. Apparatus for producing a granular compositions comprise a viscous liquid composition supply, a ligament forming device in fluid communication with a viscous liquid composition supply, one or more liquid jet nozzles adjacent an outlet of a ligament forming device, and a dryer.
